

Ram Base

USERS MANUAL

CHIEFTM
automotive technologies

USAGE

The Ram Base (see Figure 1) holds Chief's auxiliary rams perpendicular to the mainframe when lifting a vehicle or making a downpull. The stability the accessory provides reduces the possibility of rams tipping over or kicking out in these situations. Such mishaps delay a repair process and can damage a ram, in particular, its quick coupler.

Rams are secured in the Ram Base by tightening the thumb screw on the side of the accessory.

Figure 1

CAUTION: The Ram Base is designed for the 2, 4 and 6 inch auxiliary rams (see Figures 2, 3, and 4) and must be positioned on a flat, stationary surface to reduce the possibility of the ram tipping over or kicking out.

NOTE: Remove the threaded protection collar on the 2 inch auxiliary ram before installing it in the Ram Base.

Figure 2

Figure 3

Figure 4

Chief's Ram Base can be used in a variety of lifting or pulling situations. In Figures 5 and 6, it holds a 4 inch ram perpendicular to the mainframe as the ram lifts the vehicle. A block of wood is positioned between the ram and the vehicle to distribute the upward pressure. Figure 6 shows the lift was made to install one of Chief's Universal Anchoring Stands. In Figure 7, the Ram Base holds the ram perpendicular to the underside of the mainframe as the ram makes a downpull. When using the accessory to make a downpull, its base must span one of the tie down holes. As shown, the chain passes through tie down holes adjacent to the Ram Base.
